1 Who we are?

Accurate Projects Company is interested in electromechanical contracting projects, especially within the petroleum sector, construction, banking and industry.

It was established in 2017 as a limited liability company, and since its inception, it has implemented large projects such as the main cooling plant in the strategic leadership project (the largest national project), as the partner electric contractor in the third station, and other projects in the industrial and construction sector such as the Ministry of Endowments building in the new administrative capital, as shown in the previous reference Business list.

The company is also concerned with maintenance, services, rehabilitation and retrofit. It has the technical personnel to carry out these tasks.

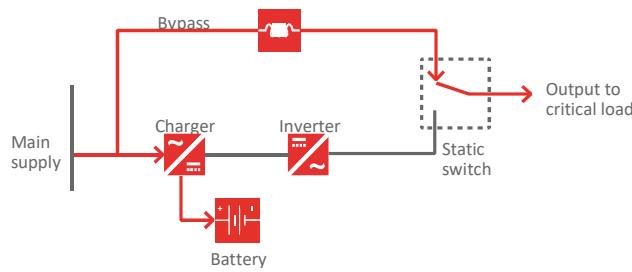

Recently the company started to take an interest in trading and supplies, and we established a sales department for trading. The department is managed by a group of sales engineers with experience in this field in the Egyptian market. We have a direct supplying for ABB low power UPS up to 50KVA which detail focused in this brochure.

In addition, we are working in other products from Eaton and Siemens that detailed in other brochures.

2 UPS introduction- UPS topologies

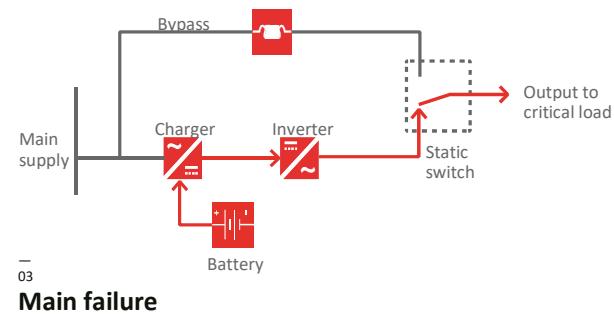

Line-interactive

The line-interactive UPS operates similarly to the offline/standby UPS in that it typically supplies the critical load through the bypass line and then transfers it to the inverter in the event of a bypass supply failure. The line-interactive system utilizes the battery, charger and inverter in the same manner as the offline/standby unit, but with added circuit regulators in the bypass line. This regulator transfers the load to the battery-fed inverter supply less frequently, which makes the line-interactive UPS more efficient in operation costs and battery wear and tear compared to the offline/standby UPS system.

Normal operation

The figure shows the line-interactive UPS system during normal operation and mains failure. During normal operation, the mains supply powers the electrical load through the bypass line and charges the battery if needed. During mains failure, the battery supplies power to the inverter which provides power to the electrical load.

Main failure

Online/double-conversion

An online UPS offers the most comprehensive solution in uninterruptible power. The online UPS system replaces the battery charger with a rectifier/charger block, which is either two separate units or a combined power block.

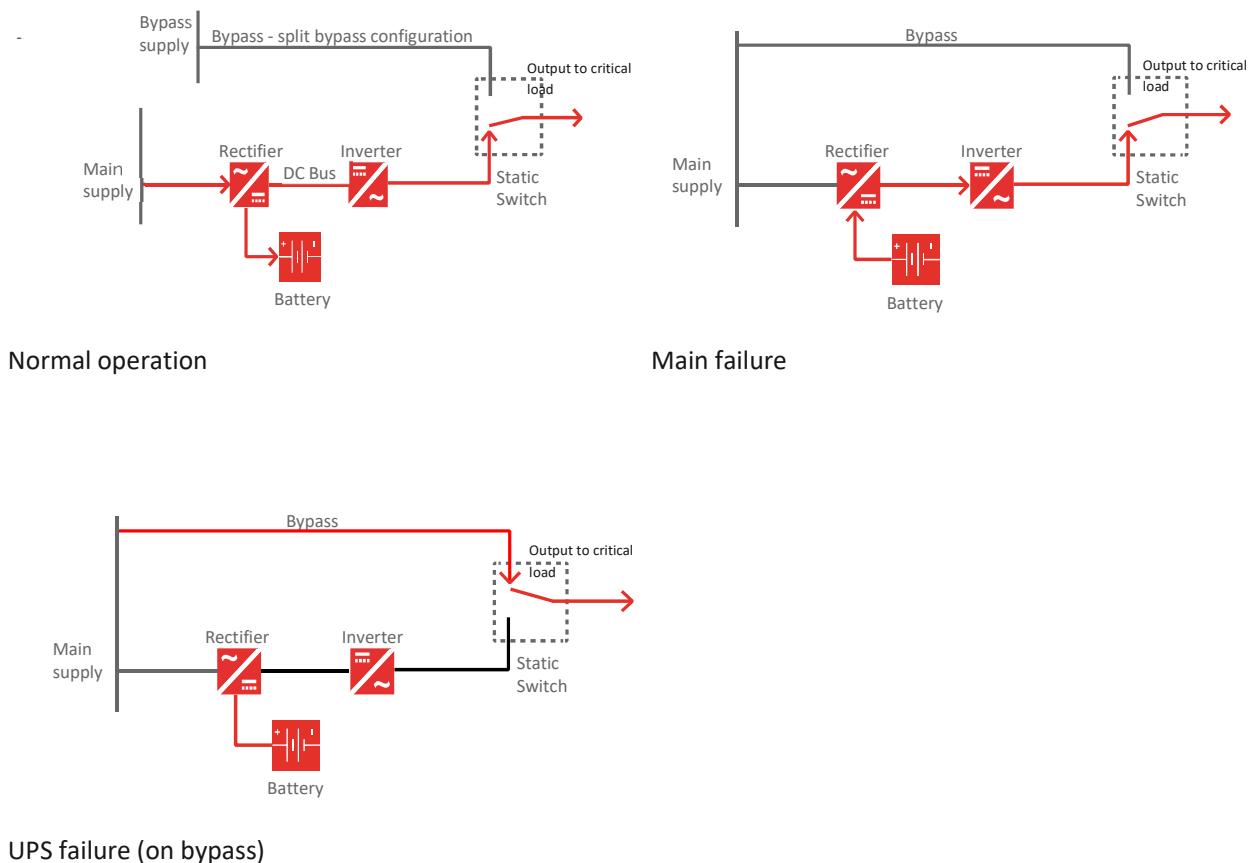

The figure below illustrates the online UPS system during normal operation, mains failure and UPS failure on bypass mode. When mains power is present, this power block charges the battery and supplies the inverter with a steady voltage supply. During mains failure, the UPS rectifier drops from the circuit, allowing the batteries to maintain constant and uninterrupted power. When power is restored, the rectifier begins carrying most of the load and recharging the batteries.

The rectifier/charger has a control feature that has an input current limit feature that protects critical equipment that is sensitive to minor power fluctuations from losing power. This type of UPS is perfect for environments containing sensitive electrical equipment that mandates isolation.

This UPS is also known as the double conversion UPS due to its two conversion stages of AC-DC and DC-AC. The double conversion UPS offers the greatest degree of critical power supply integrity. When the UPS input mains supply is present, the rectifier, charger, and inverter power blocks are all active and the load is connected to the inverter output from the static switch. As the load is powered from the inverter during normal operation circumstances, it is protected from power fluctuations and disturbances since the rectifier and inverter act as a "firewall" between the equipment and mains power voltage fluctuations.

If the mains input supply fluctuates above or below a preset voltage range (typically +10% to -20%) or suffers a total failure, the inverter continues operating from battery power and the event is completely transparent to the electrical load. This is because there is no power transfer operation involved.

When operating from battery power, the inverter supplies steady regulation as when the mains is present. If the mains power is not restored before the battery is depleted, then the inverter shuts down.

3 ABB Product overview

Product	PowerValue 11LI Up/Pro 600-2000 VA	PowerValue 11T G2 1-10 kVA	PowerValue 11 RT 1-10 kVA	PowerValue 11 / 31 T 10-20 kVA	PowerScale 33 10-50 kVA
Description	Cost-effective power protection and automatic voltage correction for lower-power operations and entry-level network applications such as server rooms in offices, workstations and point-of-sale.	Cost-effective power protection for entry-level server rooms, lab equipment, ATM and other sensitive electronic devices	Professional single-phase UPS for the most demanding applications, it maintains the power for critical servers, PoS, workstations, clusters and eliminates	The ideal power protection for large IT rooms, networks and critical applications with its high power capability and redundancy	The high-performance three-phase UPS for low-power applications to minimize your total cost of ownership (TCO) providing state-of-art and flexible power uptime

4 PowerValue 11T G2 1-10 kVA

A cost-effective solution for maximum power protection

UPS configuration

Standard

- Tower-type, IP20 UPS enclosure
- Single-phase in and out
- Online double conversion UPS
- Featuring voltage and frequency independent (VFI) topology, the tower-only PowerValue 11T G2 saves costs by minimizing energy losses with its double conversion efficiency of up to 95%
- Paralleling up to three units allows for increase of capacity to 30 kW or redundancy (6-10 kVA only)
- Operator and status LCD
- Wide voltage input frequency range
- User-replaceable batteries
- Inbuilt batteries (B/B2 versions only)
- Maintenance bypass switch (6-10 kVA only) • Plug-and-play

Options

- Additional battery cabinets (EBM) for scaling autonomy time • SNMP, ModBus and AS400 interface cards for remote control and monitoring of the UPS via a web browser
- Sensors – combined with the network interface card, environmental humidity and temperature sensors can be integrated into the system and monitored remotely
- Connectivity functionality via Winpower SNMP (network management card), mini SNMP, ModBus, mini ModBus, EMP (environmental monitoring probe), AS400 and mini AS400
- Available to connect with up to four parallel battery modules for extended runtime

Table 1: Ordering info (UPS with internal batteries)

5 PowerValue 11 RT G2 1-10 kVA IEC

The single-phase UPS for critical applications

UPS configuration

- Online double conversion UPS
 - Unity power factor ($kW = kVA$)
 - Efficiency in online mode up to 95%
 - Efficiency in eco-mode up to 98%
 - Configurable in tower format or rack-mount
 - Three 6 kVA and 10 kVA UPSs (max 30 kW per system) can be connected in parallel for redundancy or extra capacity
 - Cold start
 - Frequency-converter operation (50 Hz or 60 Hz)
 - Interfaces: USB, RS-232, potential-free contacts,
 - EPO
 - Load segmentation
- (for PowerValue 11RT G2 1-3 kVA)

Options

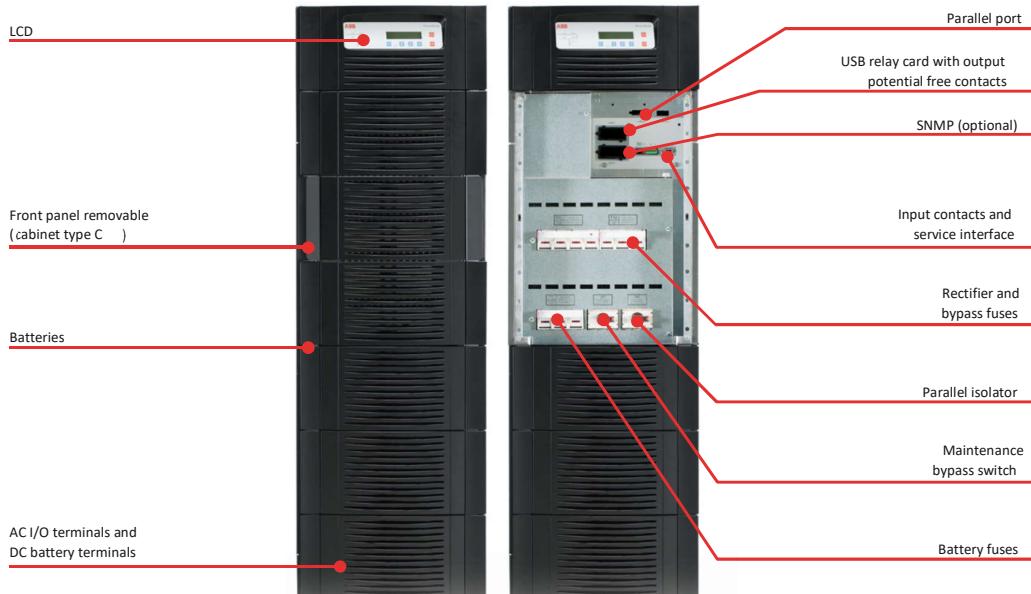

- Rack installation kit allows for easy mounting in standard 19" rack
- Full-range connectivity: SNMP, ModBus (RS-485 and TCP/IP), environmental monitoring probe, relay card with I/O contacts
- External maintenance bypass
- 1U automatic transfer switch (ATS) (PowerValue 11RT G2 1-3 kVA)
- High capacity external battery modules (EBMs) to scale up the system runtime (a plug-and-play cable included to connect UPS and other battery modules)

6 PowerScale 33 10-50 kVA

The three-phase UPS for
low power applications

UPS configuration

- Online double conversion UPS
- Capacities from 10 kVA to 50 kVA in three different cabinet sizes
- Input, bypass and battery protection fuses
- Manual bypass switch
- Up to 95.5% efficiency across a wide load range
- Single- and dual-input feed available
- Integrated back-feed protection
- Communication interfaces: RS-232 and USB ports, input dry contacts (EPO, GEN On, ...)
- With or without internal batteries
- Parallel ready (up to 20 units)
- Relay card with USB and output potential free contacts

Options

- Battery temperature sensor
- External battery cabinets
- ModBus RS-485, ModBus TCP/IP, SNMP
